

TAFE NEW ENGLAND FLEXIBLE INSTALMENT PAYMENT PLAN

At TAFE New England (TNE), we understand that paying for your course in a lump sum, upfront, is not easy for everyone. We certainly don't want money to be the thing that stops you from achieving your dreams. As a result, we have developed the TNE Flexible Instalment Payment Plan. This Plan has been designed to help you manage your course fees while studying.

There are a few requirements to be eligible for the Flexible Instalment Payment Plan:

- You must pay an initial amount of \$330.00 at the time of enrolment
- The course must run for longer than two months
- You will need to show us photo identification to verify your address and details
- If you are younger than 18, your parent/guardian will need to complete a short guarantee form
- You will not have a history of not being able to pay for your courses at TAFE New England in the past
- You must not have outstanding money owing to TNE from previous study
- You must not be eligible for a fee concession

FLEXIBILITY

The great thing about the TNE Flexible Instalment Payment Plan is (you guessed it) how flexible it is!

- You will be able to make instalment payments in advance, if your circumstances change
- Your schedule of payments will be planned and confirmed in writing with you. The guide on the next page shows the options available to you
- Instalment payments can be made using BPAY. BPAY details will be shown on your fee statement. This makes it really easy for you as you can "set and forget" and you won't have to come into a campus to make any of your payments.

THINGS YOU NEED TO KNOW BEFORE SIGNING UP

If you decide this is the option for you, you will need to complete a short application form, have your application approved by TNE, and make the initial payment before you can start studying with us. Call 1800 448 176 to obtain a form today!

Our Flexible Instalment Payment Plan has been designed to be finalised prior to the completion of 75% duration of your program of study. The guide on the next page shows you how this will work.
